Introduction

The SPR DC Inventories file is created by SPR and contains the positive inventory quantities for all SPR SKUs at all SPR DCs. It does not contain zero quantities or SKUs that have no inventory. The file is in XML format and the XSD definition file can be requested from the SPR helpdesk.

FTP Login Information

The SPR DC Inventories file can be retrieved via **FTP**.

FTP to the SPR server **gis.sprich.com**.

The login account is “**FTPINV**” and the password is “**FTPINV**”.

Get the file named **spr.inventories.xml**.

SPR DCs Inventories File

The SPR DC Inventories file is generated each morning at 7AM. It contains the inventories at all DCs for all active SKUs at that time. More frequent and more narrowly defined updates can be obtained by using the SPR Web Services. The SPR Helpdesk can provide additional information about these services.

SPR DCs Inventories File Schema

The schema for the SPR DC Inventories file is available on request from the SPR Helpdesk. The schema is an XSD file. In addition a sample inventory file is also available.

Inventories XML – Tags

Each valid order tag or element is listed with an explanation of its function.

Tags

`<xs:element name="Order" minOccurs="1">`

1. `<xs:attribute name="EnterpriseCode" use="optional" default="SPR">`
An SPR Business Unit must be selected for each order. If the default is selected, the order will be processed by SPR USA.
Options: SPR = SPR USA [Default]
 SPC = SPR Canada
 HRZ = SPR Horizon
 SPS = Special Order SKU

Appendix A – Sample XML File

Abbreviated XML DC Inventories File

```

    <c d="24" q="21"/>
    <c d="31" q="18"/>
    <c d="33" q="14"/>
    <c d="34" q="24"/>
  </i>

  <i n="AAG70-008-05" s="A" u="EA">
    <c d="31" a="49"/>
  </i>

</global_onhand>
```

Notes

The tags have been abbreviated to help reduce the size of the file. The following list shows the expanded meanings for the tags.

i	==	Item
n	==	Number; i.e., SKU or Item Number
s	==	Status of Item
u	==	Unit of Measure (UOM) of Item
c	==	Content
d	==	DC
q	==	Quantity at the DC

Appendix B - FAQ

General Questions

Q. Why should XML be used?

A. XML has become the international standard for EDI transmissions. Many systems use XML as their default.

Q. Why are only positive inventory values included in the file?

A. Every attempt has been made to simplify and reduce the size of the file. To help achieve that goal, the zero quantities and item numbers which have no inventory have been removed.

Q. How should I implement this file?

A. Zero out all quantities for all item numbers and then load the file.

Q. When is the file available for retrieval?

A. A new inventories file is placed in the mailbox at 7AM each morning. The file can be retrieved at any time.
